Mental Health Services  
(301)600-1755

Our staff is comprised of seasoned clinicians in fields of social work, psychology and child psychiatry. The team is very experienced in addressing the mental health needs of young children through adolescents. Our approach is goal oriented with strong family/ caregiver involvement.

In addition to treating a wide range of childhood and adolescent disorders, we have special expertise in trauma, including abuse, neglect and related placement and attachment issues. We also help children cope with family issues and school related problems.

Today’s families and schools face very unique challenges. Children/teens can suffer from the uncertainties and demands within their environments but often do not readily talk about them. If you as a parent/caregiver notice unusual or very different behaviors or emotional reactions in your child, please call for an evaluation.
